

Cindy's Jumpers Margarita Machine Rental Operating Instructions

INSTALLATION

1. Place the Margarita cart in a prominent leveled location.

NOTE:

Do not remove the Margarita Machine from the heavy duty card in which it came in. These machines are very heavy and may damage any other table.

2. Plug the power cord into a suitable dedicated (20 amp) 120 volt outlet that can provide the required wattage. Having other appliances on a circuit, may prevent your unit from receiving the necessary voltage.
3. Once the machine is connected. Turn the power button to the ON position. The power button is located on the top left corner of the digital display box.

GENERAL OPERATING PROCEDURES

1. Add one ½ gallon bottle of mix, 2 gallons of water and any desired alcohol in each bowl. Average alcohol is 1 liter to 1.75 liters of alcohol per bowl depending on how strong you want your drink.

NOTE:

Make sure that both sides are on the “Auger ON” position and “ICE” settings. If you leave it on the “CHILL” position the machine will never freeze the drink.

5. Average freeze time is 2-3 hours depending on the outside temperature and if it's in direct sunlight. Try to have the machine in the shade for faster freezing time.
6. Each bowl will make approximately 80 – 7oz servings.

CLEANING

No Cleaning is required just empty out all the extra mix and run cold water through the margarita machine.
